

Let us look at 4 days of bets and see how the Tripler Staking works alongside them:

Day 1:

Win 1.83 – 1pt (1.83pts)

Win 2.62 – 1pt (2.62pts)

Lose 3.2 – 1pt

Tripler Staking: £2500 Bank @ £25 per point

Total Staked: 3pts Total Returned 4.44pts Profit: 1.44pts

$1.44 \times £25 = £36$

New Bank: £2536 @ £25.36 per point

Day 2:

Lose 1.9 – 2pts

Win 1.5 – 3pts (4.5pts)

Win 3.1 – 3pts (9.3pts)

Total Stake: 8pts Total Returned: 13.8pts Profit: 5.8pts

$5.8 \times £25.36 = £147 + £2536 = £2683$

New Bank: $£2683 / 100 = £26.83$ per point

Day 3:

Lose 2.7 – 1pt

Lose 2.1 – 2pts

Win 1.8 – 3pts (5.4pts)

Day 4:

Win 1.62 – 3pts (4.86pts)

Total Staked: 9pts Total Returned: 10.26pts Profit: 1.26pts

$1.26 \times £26.83 = £33.80$

New Bank: $£2683 + £33.80 = £2717 = £27.17$ per point

Let us look at 4 days of bets and see how the Platinum Staking works alongside them:

Day 1:

Win 1.83 – 3pt (5.49pts)

Win 2.62 – 3pt (7.86pts)

Lose 3.2 – 3pt

Platinum Staking: £2500 Bank @ £25 per point

Total Staked: 9pts Total Returned 13.35pts Profit: 4.35pts

$4.35 \times £25 = £108.75$

New Bank: £2608 @ £26.08 per point

Day 2:

Lose 1.9 – 3pts

Win 1.5 – 4pts (6pts)

Win 3.1 – 4pts (12.4pts)

Total Stake: 11pts Total Returned: 18.4pts Profit: 7.4pts

$7.8 \times £26.08 = £203.42 + £2811 = £2811$

New Bank: $£2811 / 100 = £28.11$ per point

Day 3:

Lose 2.7 – 3pt

Lose 2.1 – 4pts

Win 1.8 – 5pts (9pts)

Day 4:

Win 1.62 – 4pts (6.48pts)

Total Staked: 16pts Total Returned: 15.48pts Profit: -0.52pts

Next stake in the series for Bet 2 on Day 4 is therefore 4pts.

Soon as the series gets in profit, you reinvest the profits and establish a new, higher point value

Fixed % Staking For Place Only Bets

How this works is you divide your bank by 100pts

If you stake 10% fixed, your stake will be 10pts and if the bet wins the profit gets added to the bank.

You then have a revised 10% stake as measured from the new bank high point.

And so on, every time the bank reaches a new highpoint you increase your 10% stake.

If a bet loses, you keep the stake the same until it reaches a new bank highpoint – it does not decrease during this time.

10% is a rapid growth but higher liability approach.

More comfortable would be 7.5%, 5%, 2.5% or even 1%!

£1000 grown by an average of just 1% per betting day, will be £40,000 within one year.
